PROFESSIONAL SUMMARY

Unity-focused game developer with hands-on internship experience shipping gameplay systems for MMORPG and educational game titles. Proficient in C#, Unity UI Toolkit, state machines, and Git-based collaborative workflows. Holds a B.A. in Computer Systems with a Game Development concentration and a strong portfolio of original projects spanning roguelike, RPG, and UI-heavy systems.

EDUCATION

California State University, San Bernardino

B.A. in Computer Systems, Game Development Concentration. Dean's List: Spring 2025.

Relevant Coursework: Game Programming, Operating Systems, Software Engineering

San Bernardino, CA

May 2026

Norco College

A.S. in Game Development, Game Design, and Game Programming. Dean's List: Fall 2021,

Spring 2022.

Relevant Coursework: Certificates: Game Development, Game Design, Game Programming

Norco, CA

2023

EXPERIENCE

Game Designer

Sports Media Inc.

April 2026 – August 2026

Remote

- Designed a standardized 25-minute game loop incorporating player customization, educational modes, and challenges into a unified state machine.
- Architected a centralized Hub-and-Spoke navigation system enabling players to traverse six unique minigames across Teach, Guided Play, and Challenge modes.
- Built a Character Customization Module with conditional logic that renders player-designed assets in the UI while maintaining standard gameplay models for consistency.
- Debugged and optimized interactive physics and collision logic for minigames, ensuring responsive gameplay across varying mechanics.
- Integrated a persistent Achievement System featuring high-contrast badges and real-time progress tracking visible in the main game hub.

Unity Developer

Castix LLC

January 2026 – May 2026

Remote

- Built the Character Creation Module for an unreleased MMORPG, translating static assets into a responsive UI system that allows users to modify race, gender, and appearance.
- Prototyped user interface layouts using Unity's UI Toolkit and Canvas, translating loose requirements into functional, high-fidelity screens.
- Managed version control workflows using Git, including creating feature branches, syncing with team members, and maintaining a clean collaborative environment.

AI Training and Data Annotation Fellow

Handshake

December 2025 – Present

Remote

- Evaluate AI model outputs and deliver high-quality annotations across text, audio, and visual formats for confidential research projects.
- Develop clear, structured feedback and prompts to improve model reasoning, accuracy, and consistency.
- Analyze AI behavior, identify failure cases, and document improvement opportunities while maintaining strict confidentiality and data-handling protocols.

PROJECTS

Room for One More

Developer

- Implemented enemy AI using NavMesh, state-based behavior, and adaptive difficulty scaling.
- Developed combat logic, hit detection, player upgrades, and progression systems.
- Built shop and inventory mechanics that enhance the core gameplay loop.
- Optimized performance and gameplay flow for responsiveness and balance.

Michelin Stars From Another World

Game Programmer and Designer

- Contributed to the Game Design Document detailing systems, mechanics, and level structure.
- Assisted with level design, enemy placements, challenge balancing, and gameplay flow.

- Implemented movement and combat mechanics in C# along with enemy behaviors and progression pacing.

CERTIFICATIONS

- Oracle GenAI Professional
- Google Cloud Computing Foundations
- Introduction to FinOps and FOCUS

SKILLS

Game Engines: Unity (2D/3D), Unreal Engine, Godot

Programming: C#, C++, JavaScript, HTML, CSS, MySQL, Node.js, Express.js, Lua

Game Dev Skills: Mechanics Design, System Balancing, Level Design and Pacing, Rapid Prototyping, Combat Logic, AI Behavior Systems, Player Progression Loops, Technical Documentation (GDD)

Tools: Git/GitHub, Unity Editor, Unreal Engine Editor, Visual Studio, Blender, Maya, Photoshop, Google AI Studio

Transferable Skills: Collaboration, Communication, Creative Problem-Solving, Adaptability
